## (RVSKS) Rubber feed- and silage scraper

The *all scraper*. With this scraper; feed can be pulled up, the sand is pushed out of the silage, or moved. And muddy yards and snow can be removed.

- Equipped with 2 pivot points and 4 cylinders, therefore the scraper has a swing angle of 70°.
- The front cylinders are to scrape the yard and sand from the silage and the rear cylinders to scrape the feed. The scraper comes beside the tractor. When scraping the silage, it is possible to move the scraper out of the centre by the double pivots. Hereby it is possible to clean the silage further.
- The rubber can move relative to the frame for optimum ground adaptation and uniform wear of the rubber.

## (BKZXL) Bale clamp XL

A robust grabber for if there are many bales must be moved.

- Heavy-duty mainframe in which plastic guiding strips are placed. Due to these strips, there is minimal wear, while sliding. There is no need to be lubricated
- Standard equipped with a rack for 2nd bale, pilot-operated non-return valve, and pressure relief valve.
- Cylinder dimensions 40 x 70 x 900 mm.
- Weld-on parts for tractors, wheel loaders, and telehandlers.
- Sliding tubes of the clamping arm made of 10 mm steel 52.
- Clamping tubes are bent out of one piece, 8 mm thick steel and extra stiffeners (25 mm strip) (1). Height of the clamping tube is 600 mm.
- Weight ± 595 kg.
- Double model. Clamping range 900-1900 mm, mechanical adjustable to 1.100 – 2.100 mm.
- Price with hoses and 'male' connection, without attachment parts.

## (BKROL) Light round Bale clamp

A round bale grabber for use with mini shovels and light tractors.

- Due to the shape of the clamping brackets suitable for bales of different sizes.
- Because the cylinders are positioned on the outside, the result is a minimum force and wear at the pivot point.
- The machine is built in a very compact design, so the weight is close to the vehicle, which promotes lifting capacity.
- Clamping brackets 5mm thickness.
- Due to the slotted hole, it is easy to grab a bale.
- Price with hoses and 'male' connection, without attachment parts.

## (MS) Maize leveller

The **short fixed** version has integrated lift arm - and top link points to an extra short construction.

- Solid construction for intensive use.
- Weight 575 kg.

The **swivel version** can swivel 30 degrees to both sides.

- By constructing the turning point short on the three-point, the scraper can swivel from the wall, so you do not lock up yourself against the trench wall.
- Also, it makes it easier to push the corn to the side, without driving along the side.
- Weight 775 kg.

The following applies to both scrapers:

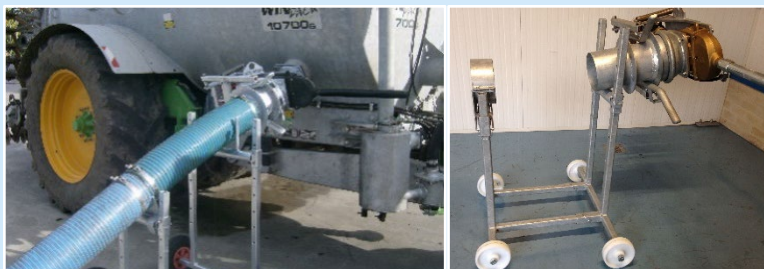

- Possible to mount a rubber strip and thus be used as a snow scraper.
- Slide plate 10 mm thick steel.
- Width 275 cm.
- Height 125 cm with see-through slots.
- Optional adjustable side shields for working width max .3500 mm.
- Prices are without attachment parts.

## (SK) Tube hitching system

The hitching system is:

- Quick connection and disconnection of the hose to the tank.
- Easy to assemble by means of 4 bolts and two hydraulic hoses on the place of the existing valve.
- Operating with one double-acting valve.
- Does not leak during transportation, due to the distance of the valve to seal rubber is minimal.
- No bends which also does not lose suction.
- Less weight as a suction arm.
- When ordering, specify whether the system will be mounted to the left or right of the tank. We recommend, if possible, to mount it on the right.

Types	Description	Price
➤ SK6	6" version; Complete with valve and hose wagon and male coupling (without 6" suction hose)	€ 2.400,-
➤ SK8	8" version; Complete with valve and hose wagon and male coupling (without 8" suction hose)	€ 2.750,-

## (DSV) Deep litter rake

The deep litter rake is designed to push the top of litter under the box in the bedding of the cow. Hereby the lounge is smooth and softer, and the litter dries better thus reducing the risk of diseases. To scrape the litter back in the lounge, topping up is less needed to still keep sufficient litter in the box, resulting in litter savings.

- Designed to work with a mini shovel and scrape litter as a solid fraction, compost, chopped straw or sand surfaces in a floating box.
- The deep litter rake is usable to the left and the right side with one double-acting control valve, the rake is locked in the folded position and in working position and can be used pushing and pulling.
- Tilting is the tipping function of the shovel.
- There is also an option to mount a scraper to clean the grids or waiting room.
- While moving the rake can be adjusted in height and the slide continues to follow the ground.
- Width folded 1260mm, working width 2500mm from the centre shovel, in the box 1.500mm.
- Width vehicle max. 1.600mm
- Weight 230 kg.

	Types	Description	Price
➤	DSV	Price is without attachment parts	€ 1.900,-

	Options	Description	Price
➤	DSVR	Rubber scraper, working width 1800	€ 600,-

## (DSVZ) Deep litter rake heavy

The DSVZ is designed for larger shovels, tractors, and telehandlers. This one has a heavier construction and the base is wider so that a wider vehicle can be linked.

- Width of vehicle max. 2400 mm.
- The rake part in the box is 1500 mm.
- Working width 2950mm from the centre shovel
- Weight 325 KG.

	Types	Description	Price
➤	DSVZ	Price is without attachment parts	€ 2.225,-

	Options	Description	Price
➤	DSVZR	Rubber scraper, working width 2400	€ 750,-

## (OKB) Weed brush

The weed brush can be linked to the (mini)shovel, (mini)crane, tractors, spike, etc. as long as the minimum oil yield is 25 litres.

- By using a movable function with the pivot in front of the vehicle, there is a large swivel range possible. Actually 70 degrees to the left and the right, which ensures that the weed brush can move far besides the vehicle. This gives a good view on the brush.
- The weed brush is designed with an oscillating construction, which ensures that the brush follows the ground. Because of this, it is not necessary to correct the height by unevenness of +/- 15 cm. At the same time, this allows the angle of the brush to be patched, by lifting or dropping the frame, for a more or less aggressive working.
- The diameter of the brush is 750 mm (Option 1000 mm).
- The brush can be operated with two hydraulic functions.
- Available with a brush of steel sheets or steel cable.
- Weight 200 kg.

	Types	Description	Price
➤	OKBS	Fixed version	€ 1.680,-
➤	OKBM	Mechanical swivel version	€ 2.100,-
➤	OKBZ	Hydraulic swivel version	€ 2.350,-

The prices are without attachment parts, for these parts see pages 61-65. For more information:

## Options Weed brush

Edge knife

Rubber flap

Tilting

**Edge knife:** The edge cutter ensures that the edges, for example from a lawn, are cut tightly. The edging knife is equipped with an obstacle protection by means of a heavy spring.

**Rubber flap:** The rubber flap ensures that the weeds do not fly far away. The rubber flap can be adjusted in several positions.

**Tilting 15 degrees:** The option allows the machine to tilt the brush 15 deg.

## (OKBD) Weed brush Duo

The double weed brush can be connected to (mini) loaders, (mini) excavator, tractor, forklift, as long as the minimum oil yield is 40L and the machine is equipped with a non-pressurized return.

The advantage of a double brush is that a larger surface can be brushed at the same time. The brushes have the same direction of rotation so that the dirt is drained on one side. A second advantage is that two brushes adapt better to uneven surfaces than one large brush, because both can oscillate independently.

The weed brush is designed with an oscillating construction, so that the brush is ground-following, therefore it is not necessary to correct the height for irregularities of +/- 15 cm. At the same time, the angle of the brush can be adjusted by lifting the frame or lowering it for a more or less aggressive effect.

The double weed brush is available as a fixed or hydraulically pivoting version. By using a hydraulic swivel function with the pivot point against the vehicle, a large swivel range is possible, namely 70 degrees to the left and to the right, so that the weed brush can reach far next to the vehicle and thus there is also a good view on the brush.

- The diameter of the brushes are 750 mm. Available with a brush made of sheet steel or steel cable.

- The brush can be operated with two hydraulic functions.

- Weight ± 300 kg

	Types	Description	Price
➤	OKBSD	Fixed version	€ 3.250,-
➤	OKBZD	Hydraulic swivel version	€ 3.750,-

	Options	Description	Price

## (OKBT) Weed brush Triple

The triple weed brush can be connected to (mini) loaders, (mini) excavator, tractor, forklift, etc. as long as the minimum oil yield is 60 liters and the machine is equipped with a non-pressurized return. With this machine, large surfaces can be brushed faster thanks to the large working width. The brushes have the same direction of rotation so that the dirt is drained to one side.

The weed brush triple is available as a fixed or hydraulically swivelling version. By using a hydraulic swivel function with the pivot point against the vehicle, a large swivel range is possible, namely 70 degrees to the left and to the right, so that the weed brush can reach far next to the vehicle and thus there is also a good view on the brush. In case of serious contamination, there is the possibility to swivel as much as possible so that brushes, brush together in a row. The fixed version is suitable for an excavator with turn-tilt head.

The diameter of the brushes are 750 mm.

A third advantage is that three brushes adapt better to uneven surfaces than one large brush, because all can oscillate independently.

- The maximum working width of the triple version is 2,225 mm.
